

# Semi-Hermetic Reciprocating Compressors

Emerson offers different ranges of semi-hermetic reciprocating compressors with distinct levels of performance and technical characteristics depending on the application requirements.

## The Stream Series

Emerson has introduced Stream, a line of semi-hermetic 4 and 6 cylinder compressors. The series provides best in class performance for today's HFC-based and uprising natural and low GWP refrigerants, significantly reducing cost of operation and environmental impact compared to competing products.

The range consists of 4 and 6 cylinder models, available with both inverter and continuous capacity modulation options.

The new Emerson line-up of 4 cylinder compressors for CO<sub>2</sub>-transcritical applications is the ideal solution for R744 medium temperature cascade and booster systems. It is characterised by a design pressure of 135 bar. Refrigerant flow and heat transfer have been optimized for best performance. In combination with the CO<sub>2</sub>-subcritical scroll for the low temperature refrigeration side, Emerson offers the most energy efficient package available on the market today.

With advanced protection and diagnostics features for system reliability, reduced service costs and increased equipment uptime, the Stream series is built to last in today's modern and changing world.

Stream Digital 6 Cylinder

## The S-Series

Its design is based on traditional “reed” valve plates similar to what is used in reciprocating compressors offered by other manufacturers. The performance of such compressors meets basic market requirements but cannot compete with Discus compressors in terms of efficiency. The S-Series ranges from 1.5 to 70 hp and is composed of K and L presented in this catalogue.

S-Series

## The Discus Range

It is broadly recognized as the most efficient compressor whatever the running condition. This range is mainly used in medium and low temperature refrigeration applications where system efficiency is a priority for the end-user. The key difference between Discus and other reciprocating compressors lies in its valve plate design. Traditional “reed” valves are replaced by ‘puck’ type valves that are integrated in the valve plate. This special design eliminates the dead volume at the end of the compression and allows for the highest compressor efficiency. To date, no other reciprocating compressor is able to match Discus in terms of performance. Available from 4 to 60 hp, they are referred to as 2D, 3D and 8D in this catalogue.

Discus 2 Cylinder

## K and L Reciprocating Compressor Range

Small 2-cylinder semi-hermetic reciprocating compressors for medium and low temperature refrigeration applications and transport refrigeration.

Designed on the principle of standard reed valve type technology, these compressors feature an internal oil pump that guarantees optimum reliability in all operating conditions.

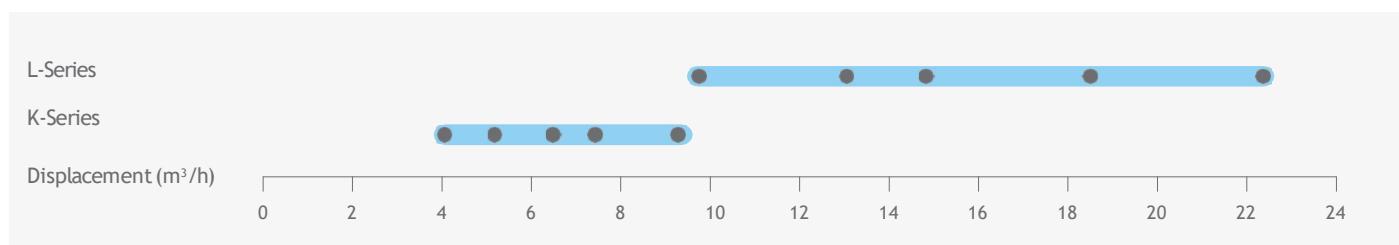

The K-series ranges from 0.5 to 2 hp and the L-series from 2 to 5 hp with a displacement of 4 to 22.5 m<sup>3</sup>/h.

These compressors are qualified for R407A/F/C, R448A/R449A, R404A and R134a.

K-Series compressor

## K & L Compressor Line-Up

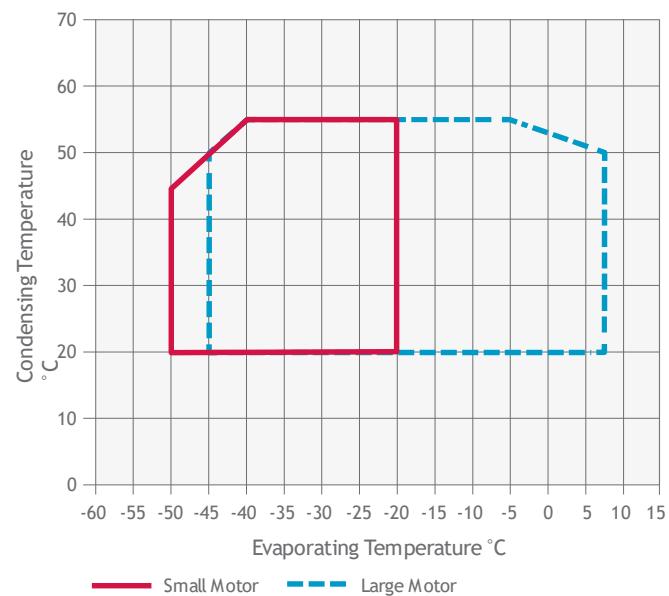

## Features and Benefits

- Large operating envelope from 5°C to -45°C evaporating and up to 55°C condensing
- Two motor sizes per displacement, optimized for different applications
- Compact and light compressors
- Ideal for refrigeration unit or transport applications
- Integrated oil pump for maximum reliability

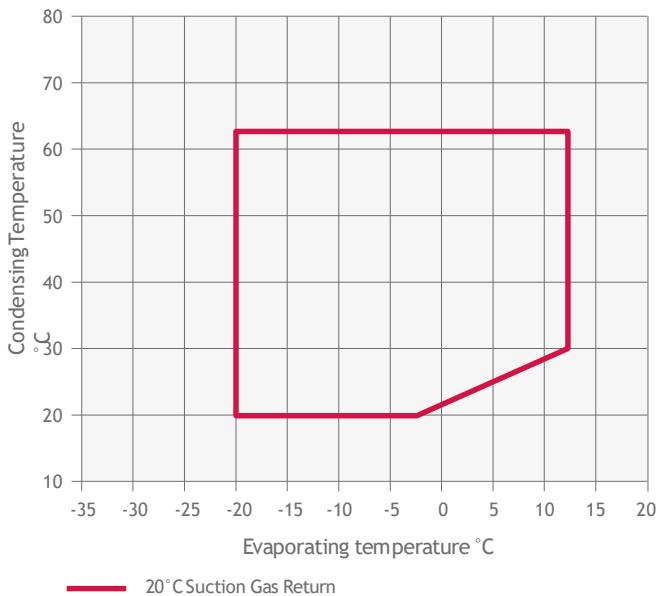

## Maximum Allowable Pressure (PS)

- Low Side PS 22.5 bar (g) / High Side PS 28 bar (g)

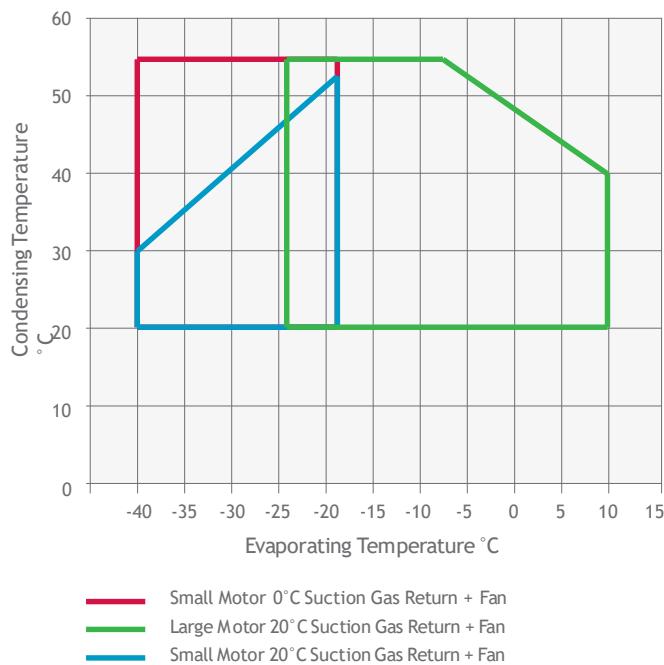

## Operating Envelope R404A

## Operating Envelope R134a

## Operating Envelope R448A/R449A

Preliminary Data

° High Discharge Temperature - Additional Cooling Required

## Discus™ Reciprocating Compressor Range

From 2, 3 and 8 cylinder semi-hermetic reciprocating compressors for medium/low temperature refrigeration and high temperature applications like process cooling or air-conditioning.

The key difference between Discus and traditional reciprocating technologies lies in the valve plate design. The Discus valve plate allows gas to flow into the cylinders with a minimum heat gain, while suction cavities are designed to smoothly route the gas to minimize losses. These effects lead to:

- Superior cooling capacity due to no re-expansion volume
- Up to 10% higher efficiency compared to conventional “cost-effective” reed type compressors
- Lower operating costs for the end-user

The Discus ranges from 5 to 60 hp with a displacement of 16.8 to 181. These compressors are qualified for R407A/F/C, R448A/R449A, R404A, R134a, R450A and R513A. All Discus compressors are designed to deliver maximum performance and reliability:

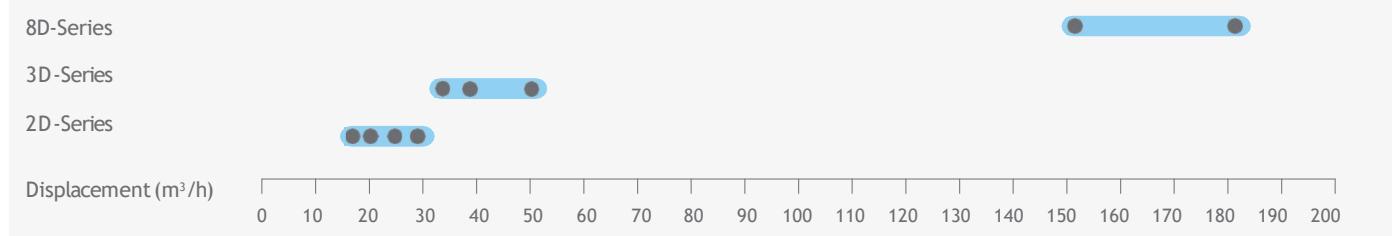

- Discus “puck” valve integrated into the valve plate for highest performance whatever the operating condition
- Positive displacement high flow oil pump guarantees high oil feeding pressure for good lubrication and bearings’ cooling

Discus compressor

- PTFE-coated bearings for especially low friction and good protection at start-up
- Electronic motor protection module
- Availability of two motor sizes per displacement. The small motor covers all refrigeration applications while the large motor can be used in comfort, process cooling or inverter applications

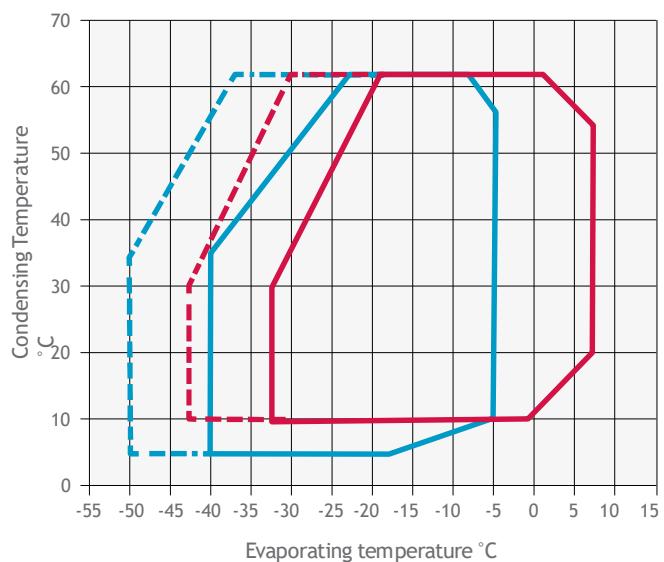

## Discus Compressor Line-Up

## Features and Benefits

- Highest level of efficiency available on the market, whatever the refrigerant and operating condition
- Integrated oil pump and Electronic Oil Pressure Switch OPS2 for maximum reliability
- Two motor sizes per displacement, optimized for different applications
- Large operating envelope that allows medium and low temperature applications to be covered by one single model with condensing limit as low as 5°C
- Provide cooling capacity modulation either by cylinder head blocked suction or with use of frequency inverters from 25 to 60Hz
- Multi-refrigerant compressor range - one model to cover all standard refrigerants
- Option to use 2 and 3 cylinder models with additional Demand Cooling function in order to achieve extended low temperature operating envelope without any superheat restriction for new refrigerants R407A/F, R448A and R449A

## Operating Envelope R404A

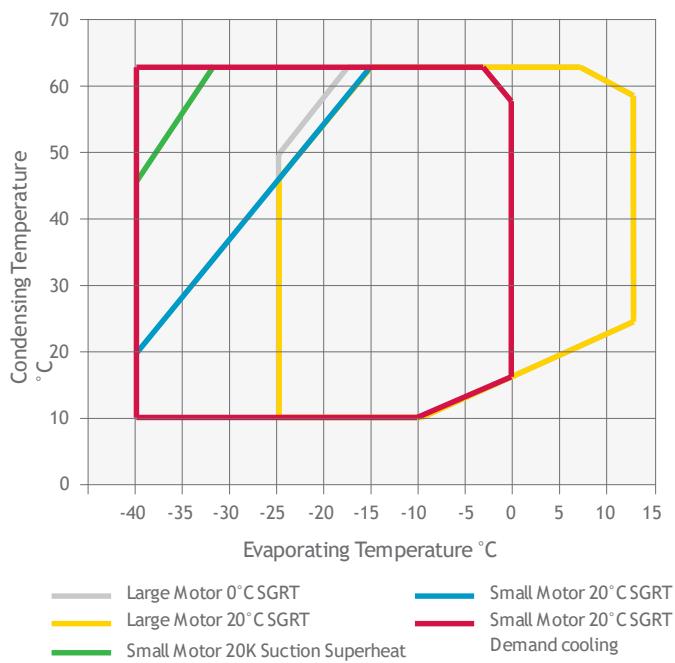

For individual model details please refer to select software.

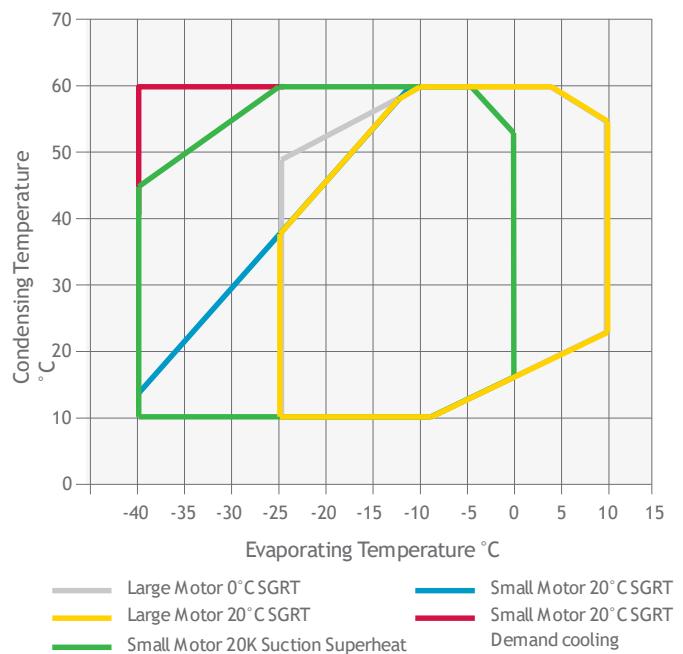

## Maximum Allowable Pressure (PS)

- Low Side PS 22.5 bar (g) / High Side PS 28 bar (g)

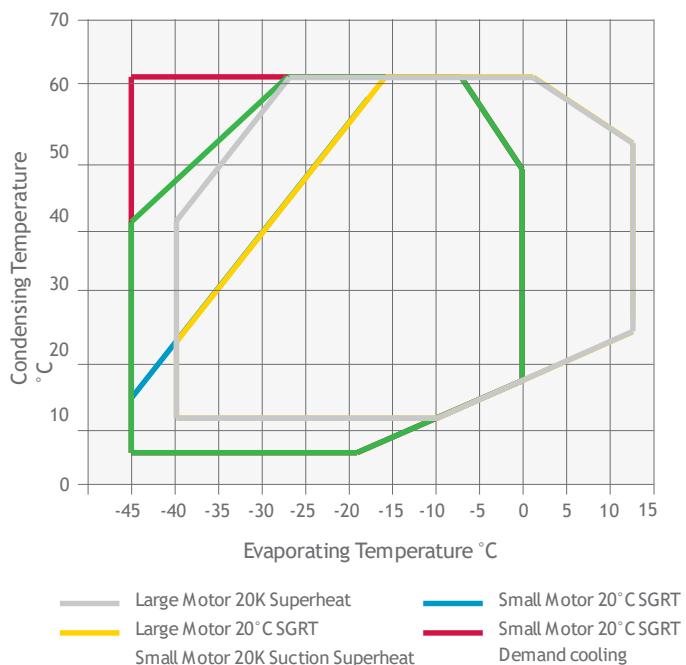

## Operating Envelope R407A

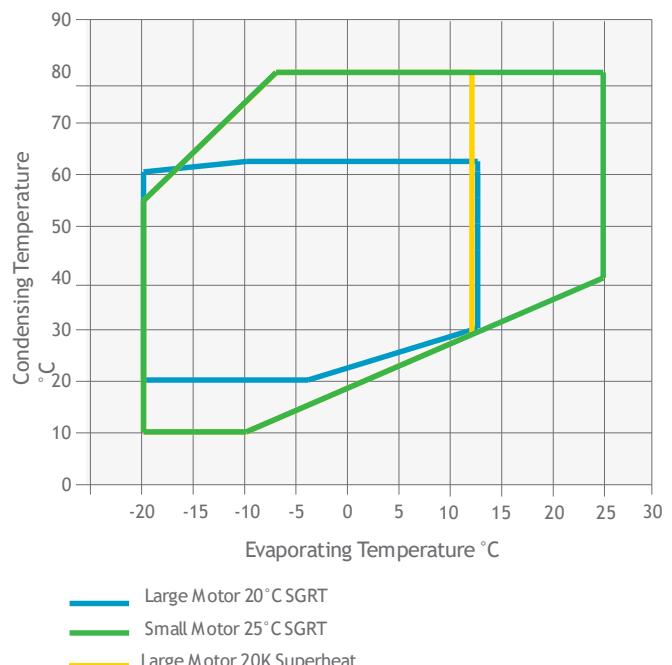

## Operating Envelope R407F

## Operating Envelope R448A/R449A

## Operating Envelope R134a

## Discus™ Digital (3Cylinder) Reciprocating Compressor With Continuous Capacity Modulation

Discus digital series with 3 cylinder compressors provide an alternative means of continuous modulation to inverter. Digital modulation is the most simple and precise method of capacity control and helps to contain applied costs associated with modulation.

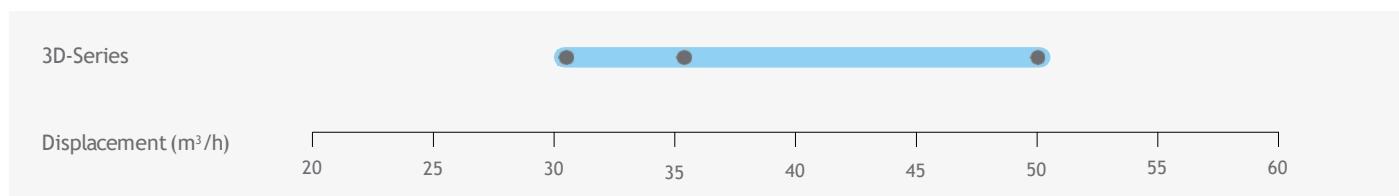

Digital technology is based on controlling a high-cycle solenoid valve fitted on one of the cylinder heads based on cycle time. The valve actuates a piston that controls the flow of gas into the suction area of the Discus valve plate.

The compressor always run at constant speed which resolves the challenges related to oil return, mechanical and electrical stress on the system.

Discus digital 3 cylinder compressor

## Discus Digital Compressor Line-up

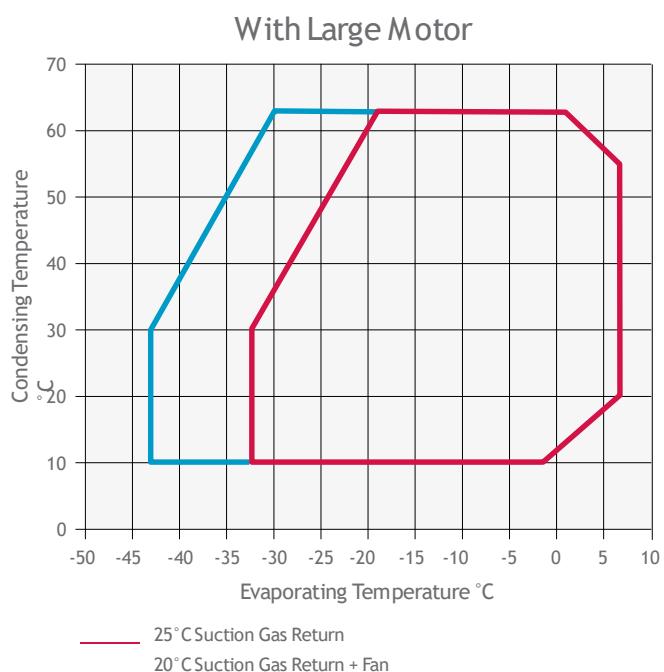

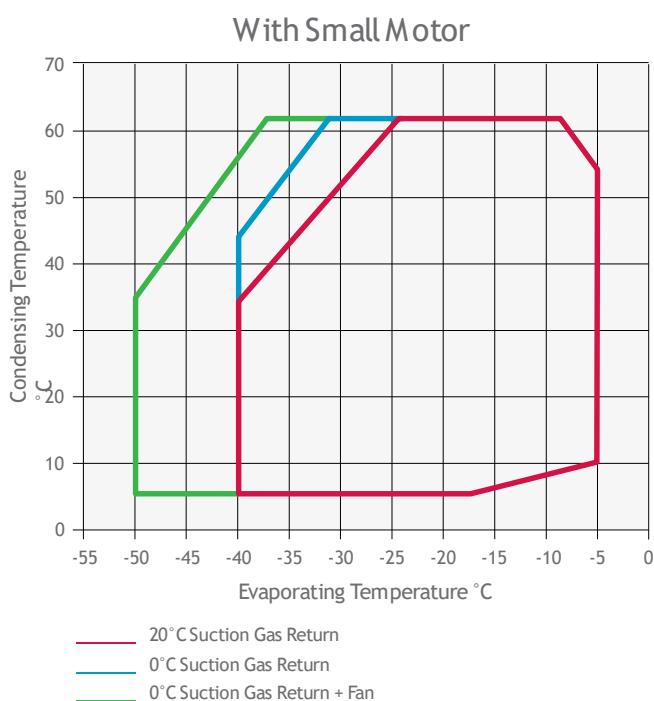

## Features and Benefits

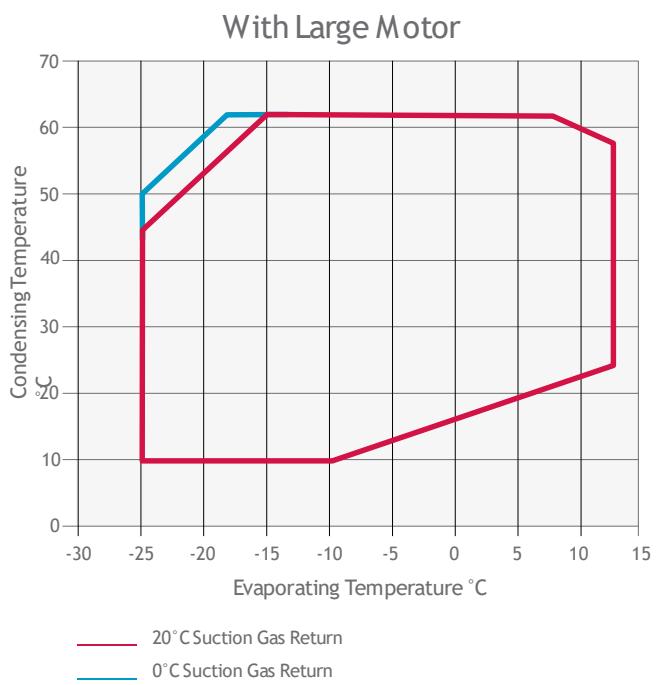

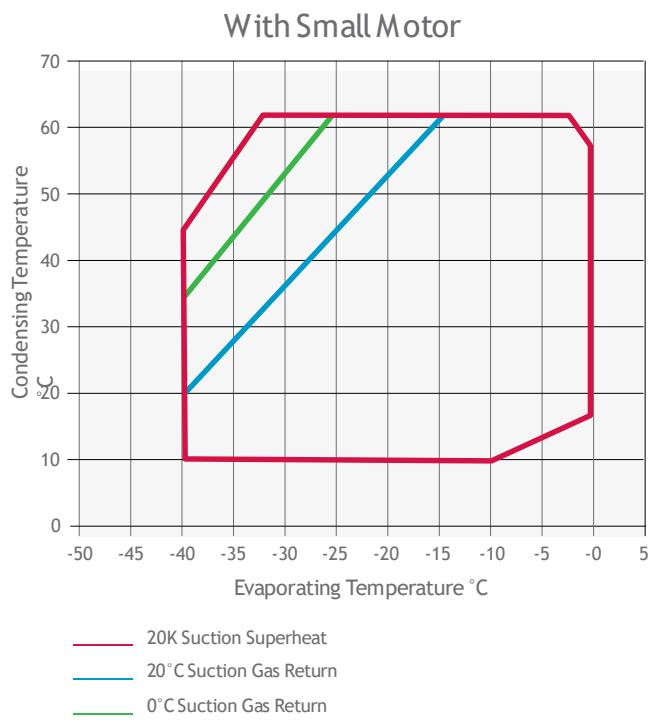

- Range of 6 models from 32 to 50 m<sup>3</sup>/h
- Compatible with R407A/F/C, R448A/ R449A, R404A, R134a, R450A and R513A.
- Continuous modulation from 10-100% ensuring a perfect match of capacity and power to refrigeration load
- Economical and reliable alternative to frequency inverters
- Precise suction pressure control with associated energy savings and stable evaporating temperatures

- Quick and easy integration into refrigeration equipment, similar to any other standard compressor
- Possibility to easily retrofit existing installations with digital cylinder head kit
- No vibrations or mechanical stress on system piping and compressor parts
- Reduced compressor cycling for longer contactor and compressor life

## Copeland™ Compressor Electronics for Copeland Stream Semi-hermetic Compressors

Copeland compressor electronics monitor and interpret data inside the compressor in order to enhance the reliability and operational performance of HVACR systems. Built upon the success of CoreSense Diagnostics introduced a few years ago, Emerson is now introducing the next generation electronics module for Stream compressors featuring a modular design using state-of-the-art electronics. This modular design with plug-in modules gives the customers the flexibility to choose the advanced features as per their system requirements. These features include advanced protection and diagnostics, Bluetooth and Modbus communication for remote monitoring, liquid injection control, dynamic envelope monitoring, digital and capacity control etc.

The benefits of Copeland compressor electronics go beyond compressor protection by assisting in system diagnosis and optimization. Providing service engineers with detailed information at the right time, system-related problems can be diagnosed faster or even before they occur. Optional plug-in modules with advanced control features and factory mounted sensors reduce the system complexity and applied costs for system manufacturers. Supermarket operators benefit from increased system uptime, reduction in food loss and reduced maintenance costs.

### Technical Specification

- Power supply 115/230VAC
- Communication protocol (Modbus® RTU and Bluetooth®)
- Bus to system controller: RS 485
- Discharge temperature sensor
- Current sensor
- Flash memory
- Alarm reset button

Copeland compressor electronic module

### Benefits

- Modularity for customer flexibility
- Optional plug-in modules with different functionalities
- Advanced protection for reliable system operation
- Diagnostics for quicker troubleshooting
- Power monitoring for operational costs monitoring
- Communication options - Bluetooth and Modbus for remote monitoring
- Compressor control for reduced system applied costs

### Functions of modules

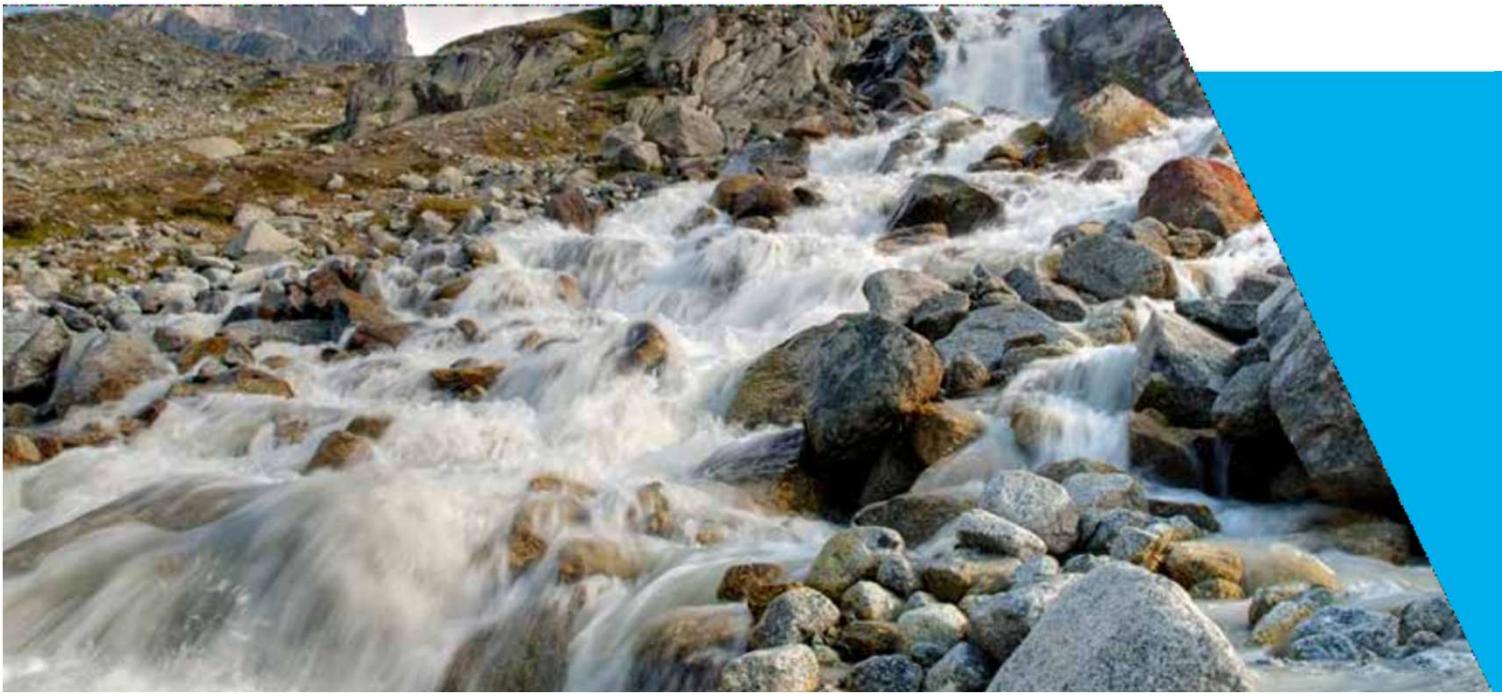

1 Base board

2 Head fan and liquid injection control

3 Digital modulation control and unloaded start

4 Modbus®

## Scope of Supply

① Optional Plug -in Modules

② Discharge Temperature Sensor

③ Current Sensor

④ Oil Pressure Switch

⑤ Communication Port

# Copeland™ Stream with Compressor Electronics, Semi-Hermetic Reciprocating Compressors for HFC / HFO Blends

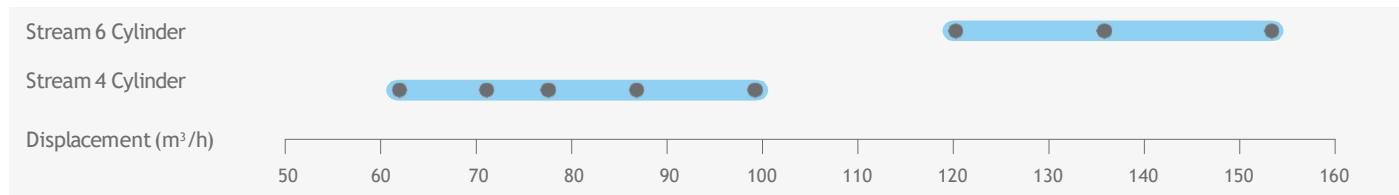

Stream series 4 and 6 cylinder compressors provide best-in-class performance, thereby significantly reducing the cost of operation and environmental impact compared to competing products. They are equipped with Copeland compressor electronics technology, featuring a modular design using state-of-the-art electronics (p.98). With advanced protection and diagnostics features for system reliability, reduced service costs and increased equipment uptime, Stream series is built to last in today's modern changing world.

Copeland Stream compressors are now qualified for low GWP refrigerants classified A2L, such as R454A, R454C and R455A.

Copeland Stream compressor

## Stream Compressor Line-Up

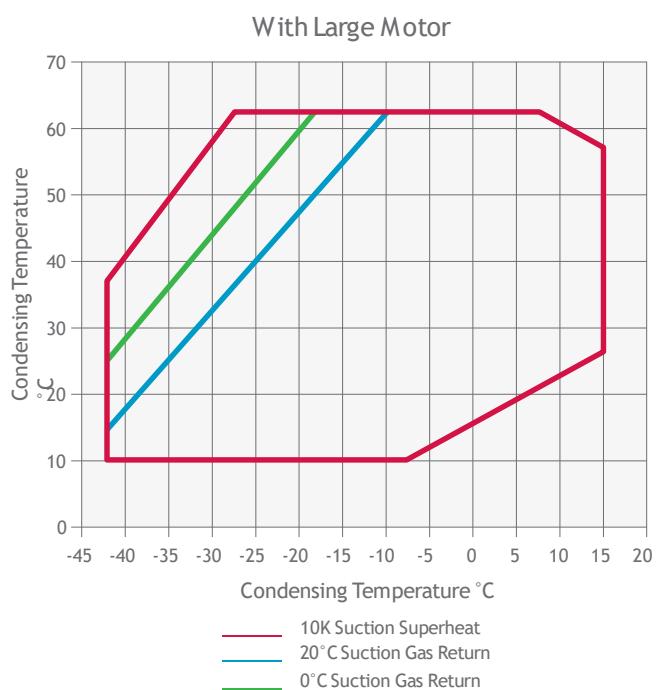

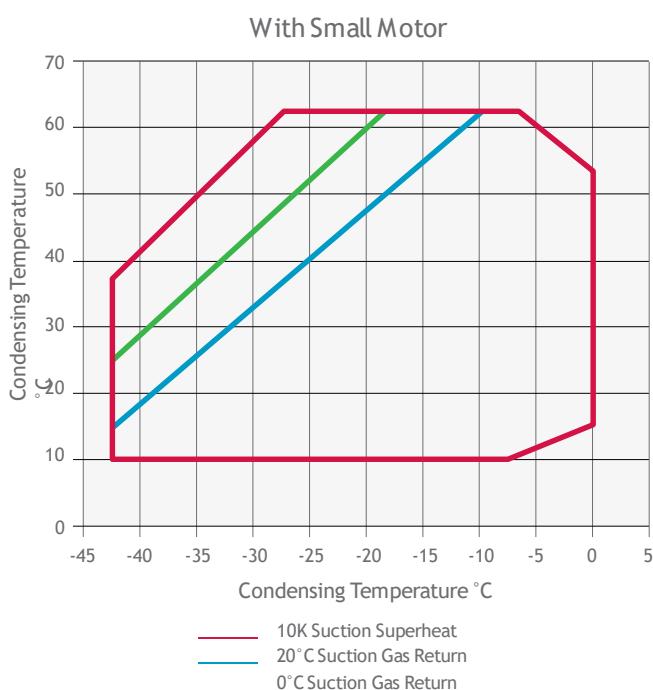

## Features and Benefits

- Range of 16 models from 62 to 153m<sup>3</sup>/h
- Best-in-class seasonal efficiencies, up to 15% higher than market standard
- Multi-refrigerant compressor as it is compatible with R407A/F/C, R448A/R449A, R404A, R134a, R450A, R513A, R454A, R454C and R455A.
- Stepless capacity modulation by means of inverter or digital modulation
- Wide operating envelope covering low- and medium-temperature refrigeration without cooling fan
- Reduced sound level, dimensions and weight by up to 45 kg
- Option to use compressors with additional demand cooling function in order to achieve extended low temperature operating envelope without any superheat restriction for new refrigerants R407A/F, R448A and R449A

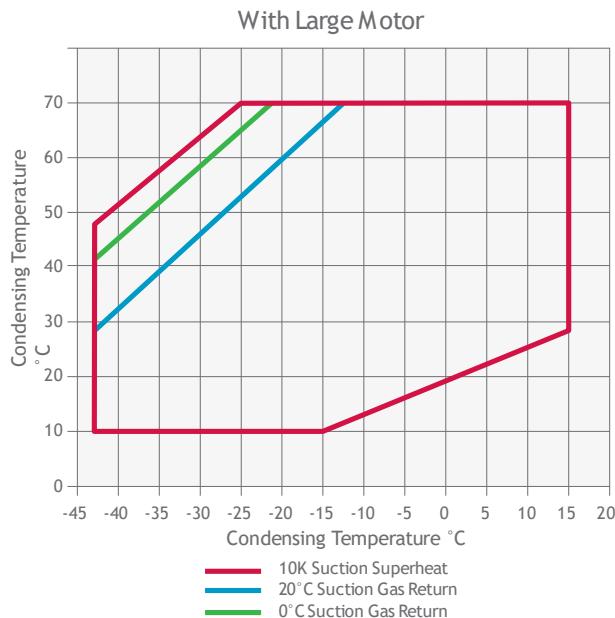

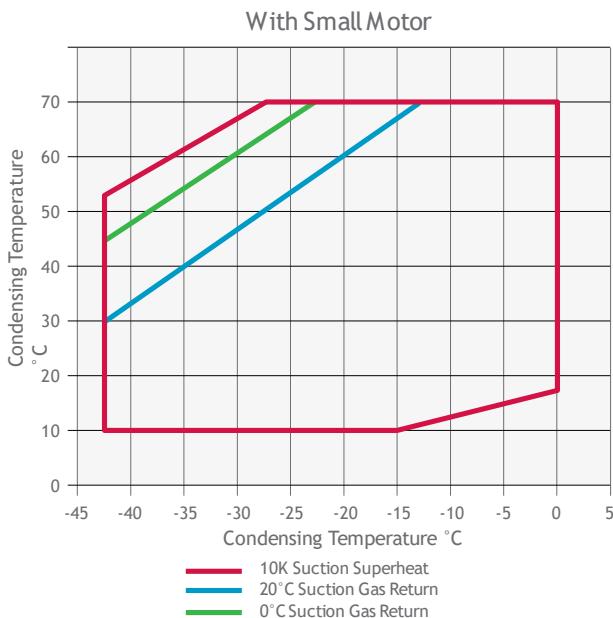

## Copeland Compressor Electronics Technology Features

- Motor and oil protection
- Storage of compressor asset and advanced runtime information
- Runtime/alarm signalling using multi-colour LED flash-codes
- Communication to system controller via Bluetooth or Modbus®
- Individual compressor power monitoring

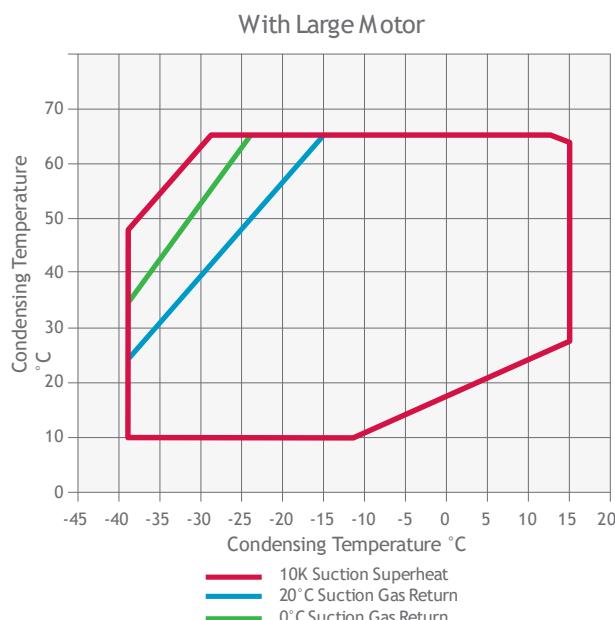

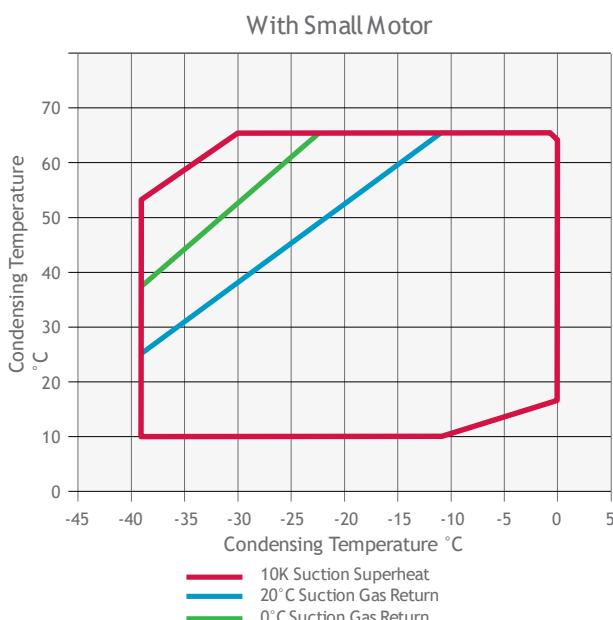

## Operating Envelope R454A

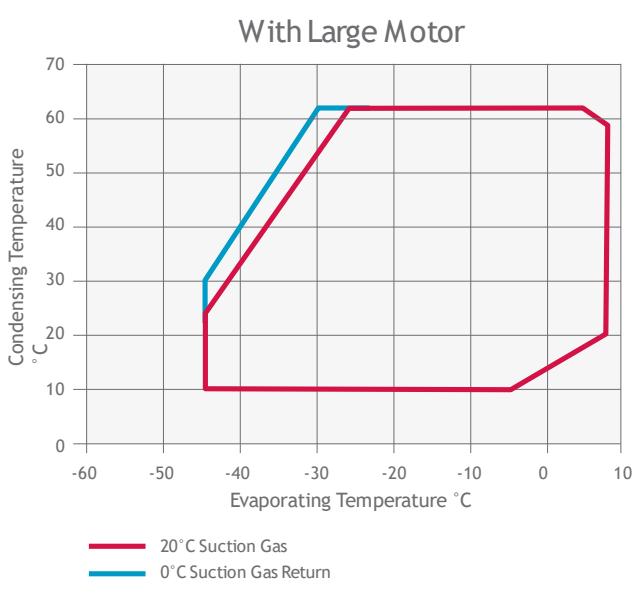

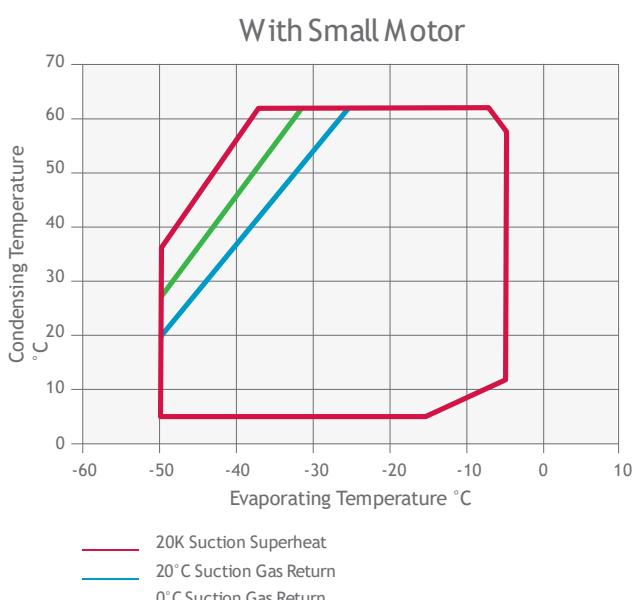

## Operating Envelope R454C

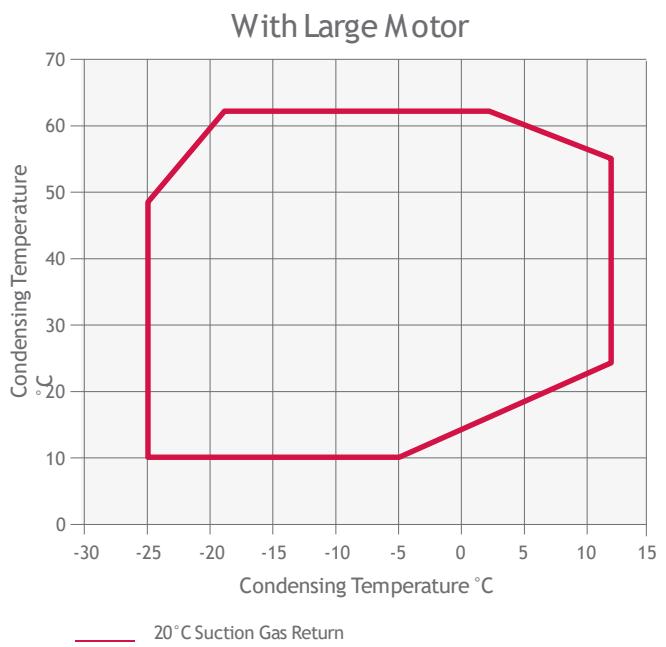

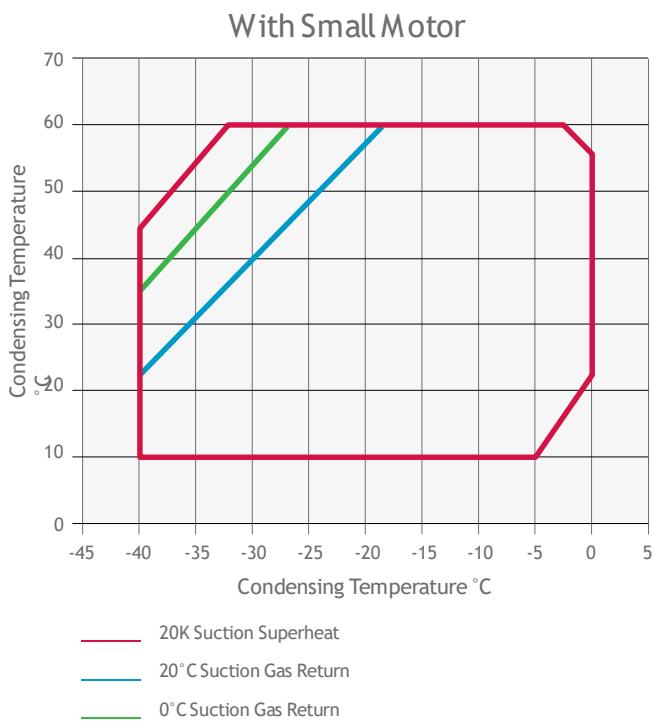

## Operating Envelope R455A

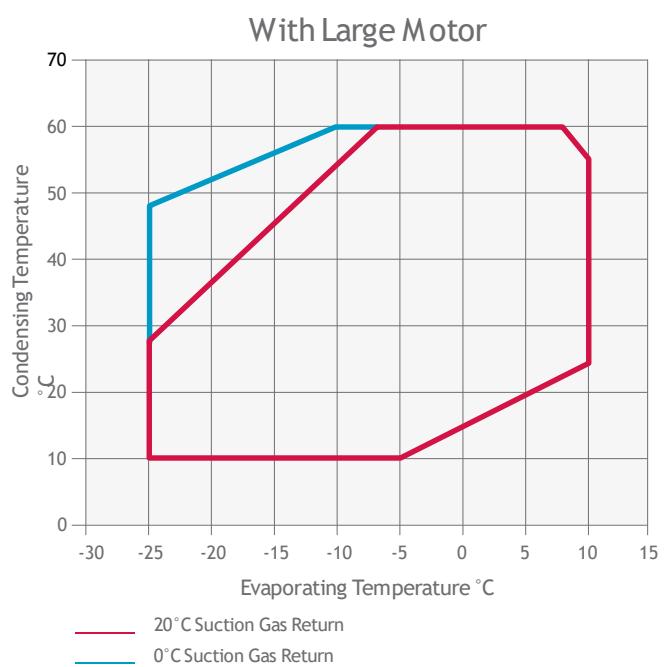

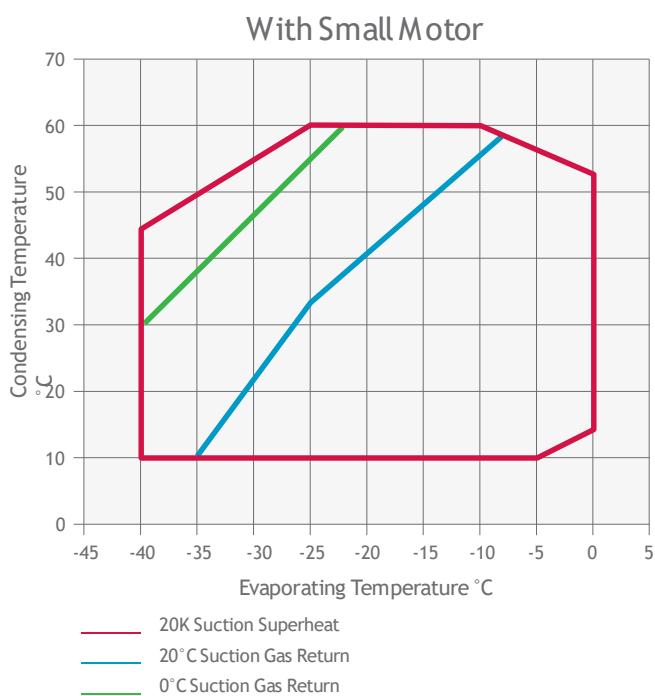

## Operating Envelope R404A

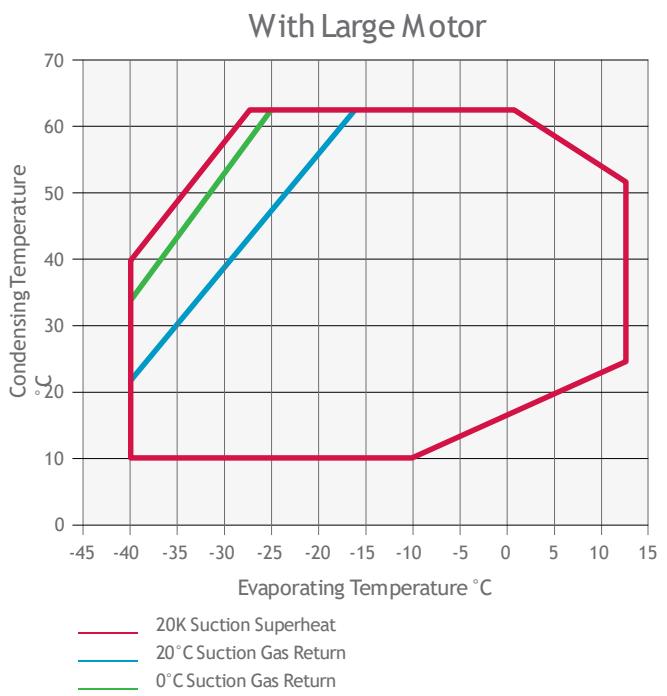

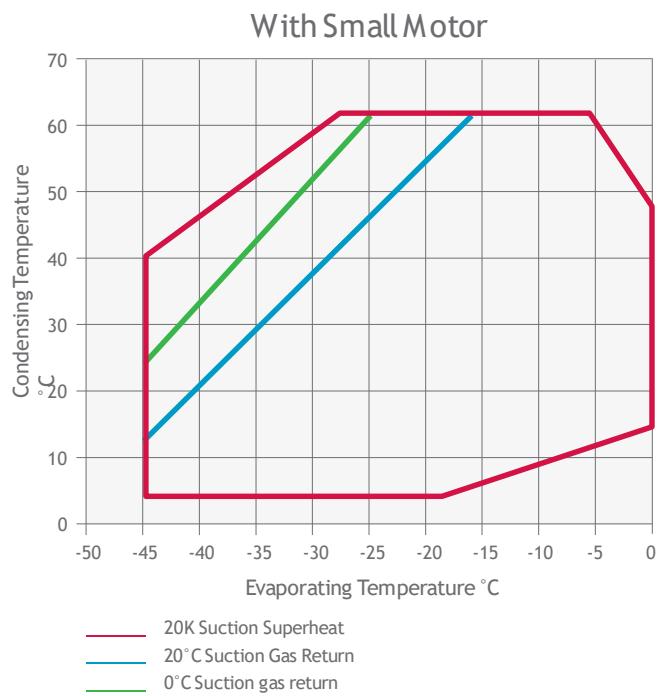

## Operating Envelope R407A

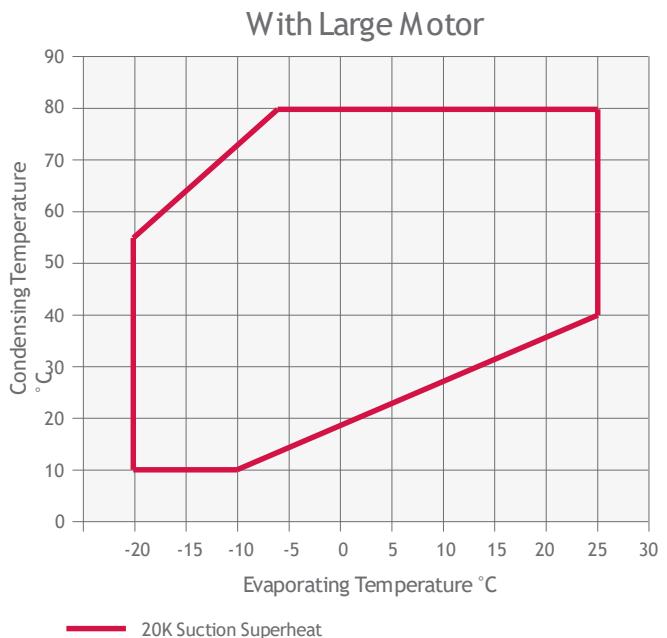

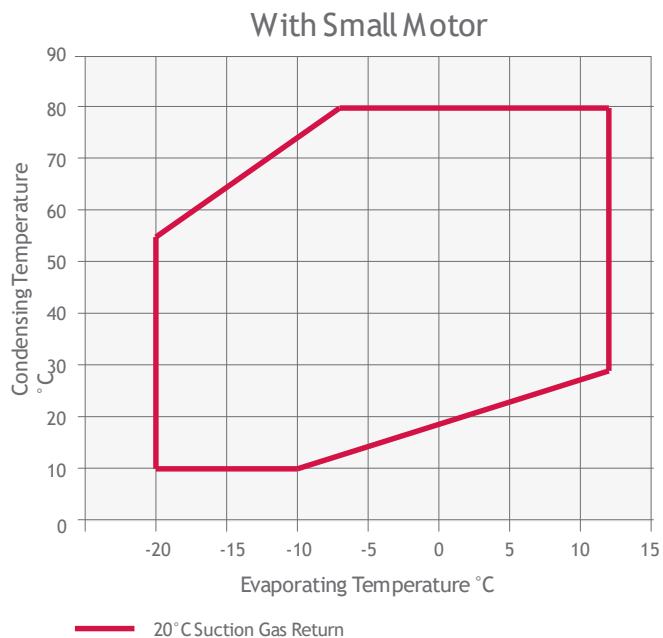

## Operating Envelope R407F

## Operating Envelope R448A/R449A

## Operating Envelope R134a

For individual model details please refer to select software.

## Copeland™ Stream Digital with Compressor Electronics for Continuous Capacity Modulation

Stream Digital series 4 and 6 cylinder compressors provide an alternative means of continuous modulation to inverter. Digital modulation is the most simple and precise method of capacity control and helps to contain applied costs associated with modulation.

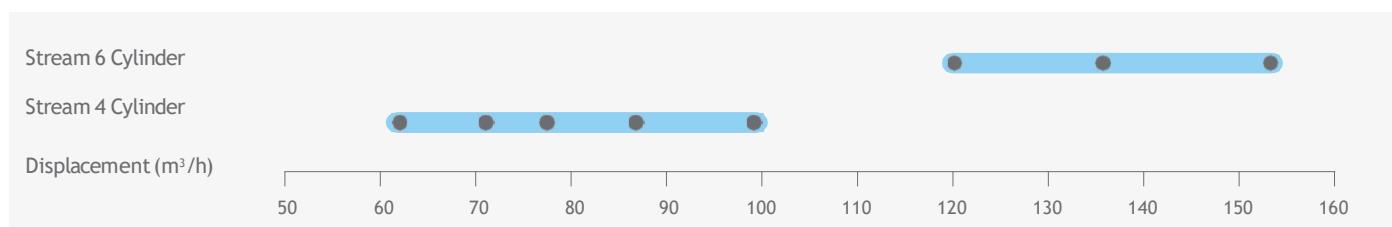

Digital technology is based on controlling a high-cycle solenoid valve fitted on one of the cylinder heads based on cycle time. The valve actuates a piston that controls the flow of gas into the suction area of the Stream valve plate. The compressor always run at constant speed which resolves the challenges related to oil return, mechanical and electrical stress on the system.

All compressors are equipped with Copeland compressor electronics technology (p.98) and offer the possibility to diagnose system-related problems faster or even before they occur.

Copeland Stream digital compressor

### Stream Digital Line-Up

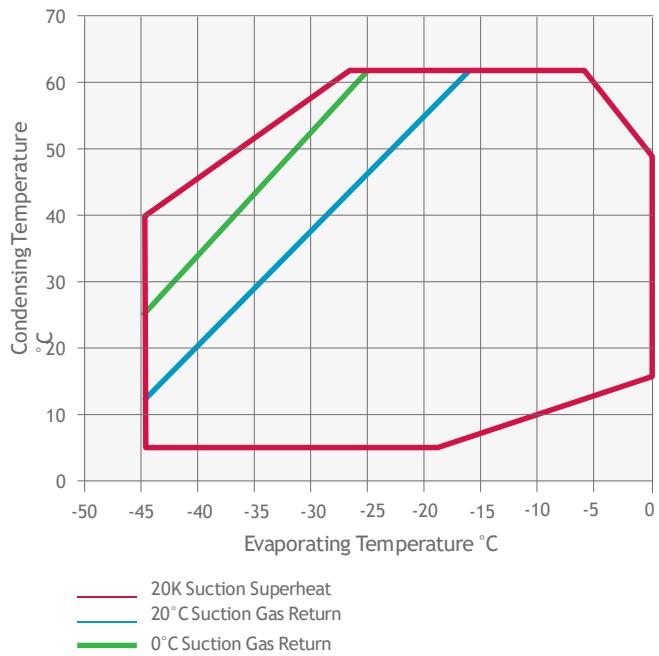

### Features and Benefits

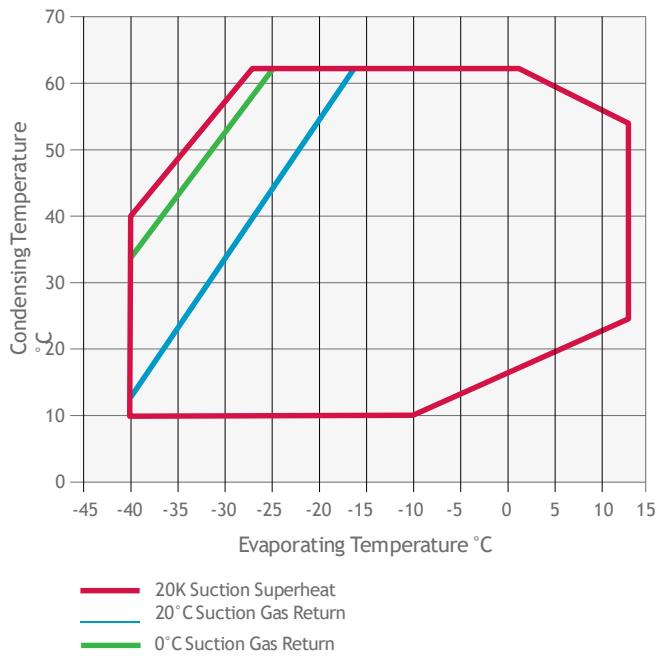

- Range of 16 models from 62 to 153 m<sup>3</sup>/h
- Multi-refrigerant compressor, compatible with R407A/F/C, R448A/ R449A, R404A, R134a, R450A and R513A
- Continuous modulation from 50-100% (4-cylinder) and 33-100% (6-cylinder) ensuring a perfect match of capacity and power to refrigeration load
- Economical and reliable alternative to frequency inverters
- Precise suction pressure control with associated energy savings and stable evaporating temperatures
- Quick and easy integration into refrigeration equipment, similar to any other standard compressor
- Possibility to easily retrofit existing installations with digital cylinder head kit
- No vibrations or mechanical stress on system piping and compressor parts
- Reduced compressor cycling for longer contactor and compressor life
- Copeland compressor electronics module providing advanced protection, diagnostics and preventive maintenance

## Operating Envelope R448A/R449A

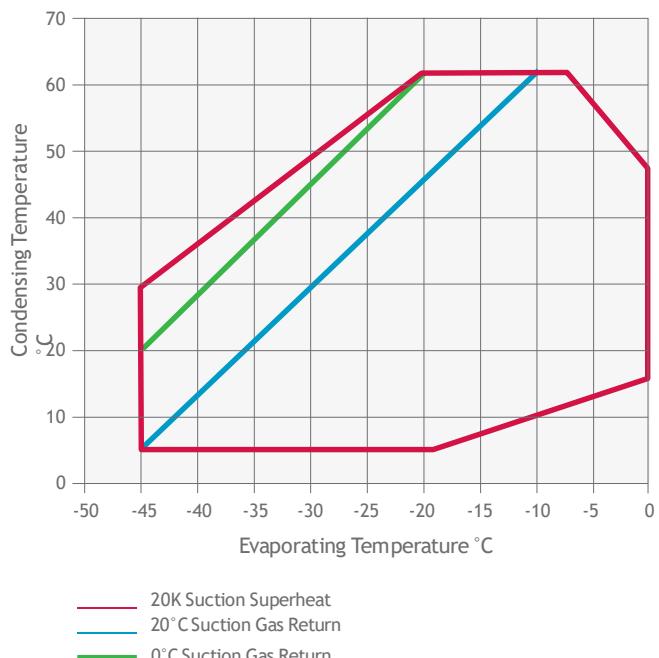

With 4 Cylinder Small Motor - 100% Modulation

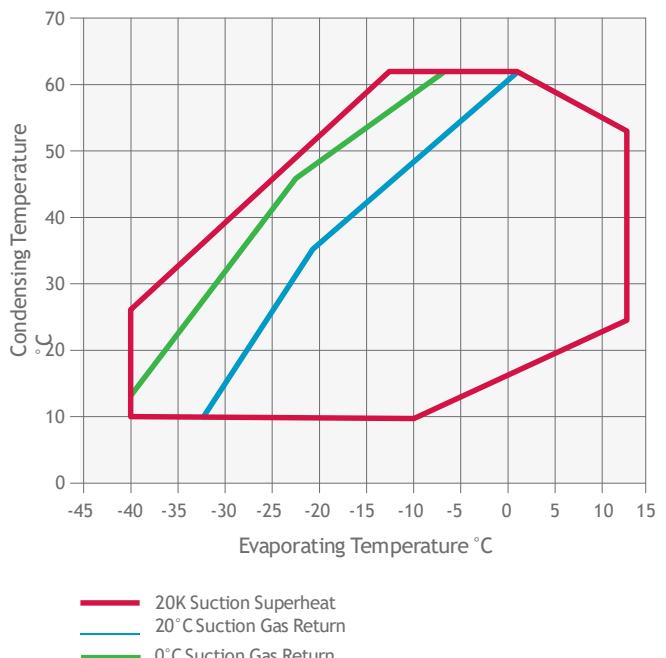

With 6 Cylinder Large Motor - 100% Modulation

With 4 Cylinder Small Motor - 50% Modulation

With 6 Cylinder Large Motor - 33% Modulation

All other refrigerant envelopes are available as 'Dynamic Envelopes' and can be accessed through select software.

Preliminary Data

## Copeland™ Stream Compressors with Compressor Electronics for R744-Transcritical Applications

Stream series of 4 cylinder CO<sub>2</sub> compressors is the ideal solution for R744 booster systems. It is characterized by a design pressure of 135 bar. Refrigerant flow and heat transfer have been optimized for best performance. All compressors are equipped with Copeland Compressor Electronics Module and offer the possibility to diagnose system-related problems faster or even before they occur.

Copeland Stream compressor for R744

### Stream Compressor Line-up

Conditions: EN12900 R744: Evaporating -10°C, gas cooler exit: 35°C / 90 bar, superheat: 10K

### Features and Benefits

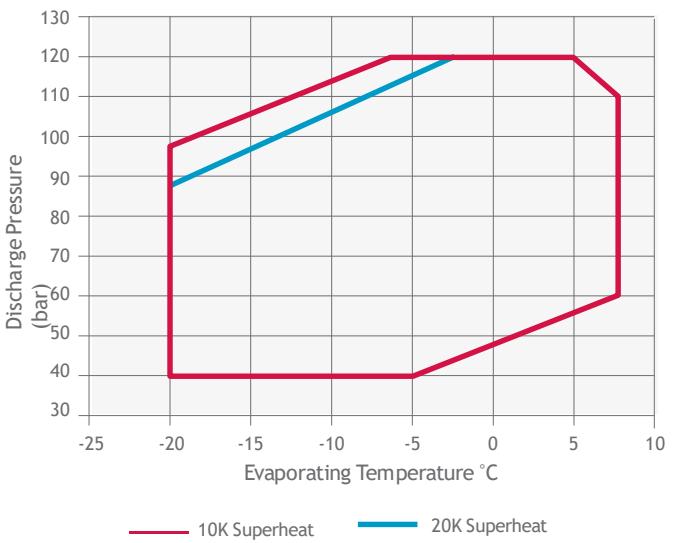

Stream provides for flexibility in pack design and operation:

- Compact dimensions
- Integrated low pressure relief valve
- Discharge temperature protection
- Service valve 360° rotation for ease of piping design
- 2 sight glasses for mounting of oil management control and visual inspection
- One oil port for oil equalization in parallel system
- Oil splash system ensuring lubrication at constant and variable speed

Designed for durability and performance in R744 applications:

- Low sound, low vibration and large discharge chamber to eliminate pulsation
- High design pressures of 135 bar (high side) and 90 bar (low side)
- Burst pressures in excess of safety factor 3
- Cylinder head and discharge plenum design minimizing heat transfer to suction side
- Stepless capacity modulation via inverter from 25 to 70Hz
- Copeland Compressor Electronics Technology
- Individual compressor power consumption monitoring

### Operating Envelope R744

Preliminary Data

# Copeland™ Stream Compressors with Compressor Electronics for R744-Subcritical Applications Requiring High Standstill Pressures (90bar)

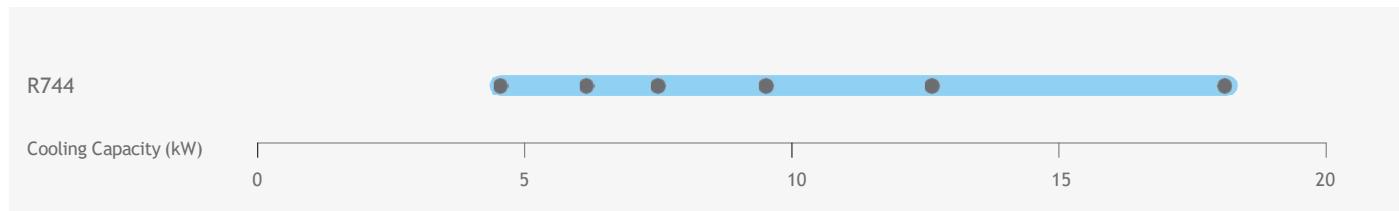

Stream series of 4 cylinder CO<sub>2</sub> compressors is the ideal solution for R744 low temperature cascade and booster systems requiring high standstill pressure of up to 90 bar suction. The use of transcritical compressors in medium / transcritical side as well as on the low temperature / subcritical side ensures that in case of power outage, the refrigeration system features full resilience and no operation disruption.

Stream is characterized by a design pressure of 135 bar. Refrigerant flow and heat transfer have been optimized for best performance. All compressors are equipped with a Copeland Compressor Electronics Technology and offer the possibility to diagnose system-related problems faster or even before they occur.

Copeland Stream compressor for low temperature applications with R744

## Stream Compressor Line-up

Conditions: EN12900 R744: Evaporating -35°C, condensing -5°C, superheat 10K, subcooling 0K

## Features and Benefits

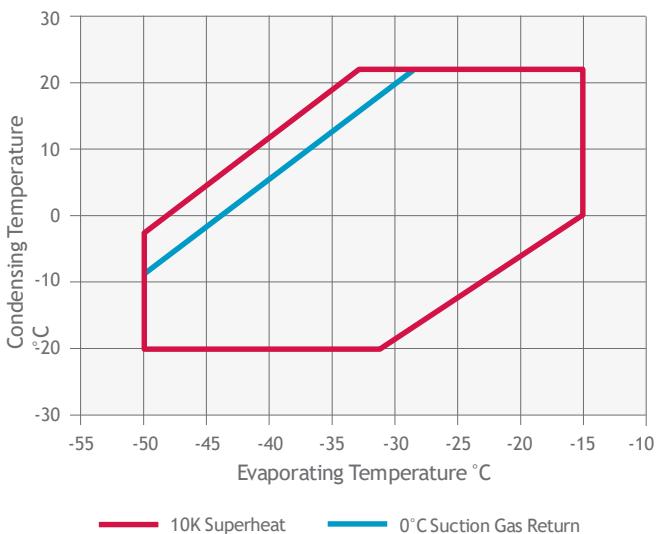

Stream provides for flexibility in pack design and operation:

- Compressor max. pressures (suction/discharge): 90 bar / 135 bar
- Compact dimensions
- Integrated low pressure relief valve
- Discharge temperature protection
- Service valve 360° rotation for ease of piping design
- 2 sight glasses for mounting of oil management control and visual inspection
- One oil port for oil equalization in parallel system
- Oil splash system ensuring lubrication at constant and variable speed

Designed for durability and performance in R744 applications:

- Low sound, low vibration and large discharge chamber to eliminate pulsation
- Optimized motor selection for low temperature running conditions
- Burst pressures in excess of safety factor 3
- Cylinder head and discharge plenum design minimizing heat transfer to suction side
- Stepless capacity modulation via inverter from 25 to 70Hz
- Copeland compressor electronics technology for advanced protection, diagnostics, communication
- Individual compressor power consumption monitoring

## Operating Envelope R744

## Service Compressors for 4 and 6 Cylinder S-Series and Discus Reciprocating Compressors

With the successful launch of Stream with Copeland compressor electronics technology 4M and 6M compressors, Emerson has decided to consolidate product families to allow our customers to reduce product proliferation and cost of operation. As a result, Emerson will in the future only produce the most efficient semi-hermetic reciprocating compressor platforms out of its current portfolio.

With a large number of 4 and 6 cylinder S-Series and Discus compressors operating in applications around the world, Emerson recognizes the importance of providing worry-free drop-in replacement models. The range of service compressors offers easy replacement ("like for like") without the need of system adaptations.

More detailed information is available with our "Guidelines for replacement of S-Series and Discus compressors" available from your Emerson sales office or as download under [climate.emerson.com/en-gb](http://climate.emerson.com/en-gb)

For your product selection in case of replacement needs, please refer to the cross-reference table below. In addition, our local Application Engineering and Sales team is ready to support you.

# Refrigeration Units

## Refrigeration Units

Emerson offers the broadest and most reliable refrigeration unit product line-up. Leveraging the latest compressor technology, each platform provides you the option to select the refrigerant, capacity and application temperature combinations that meet your requirements. A huge variety of Copeland™ indoor and outdoor refrigeration units offer the right solution for applications in food retail and food service, commercial and industrial refrigeration.

Copeland scroll outdoor refrigeration units are designed and fully equipped for a quick and easy installation and ideal to integrate into urban environments. The latest scroll technology is combined with high-quality components and covered by a weatherproof housing in a unique design.

The Copeland ZX refrigeration unit series offers the highest energy efficiency available in a standard unit to lower operators' utility bills. Ranging in size from 1.2 to 7.5 hp, the ZX units are perfectly suited for typical food service and retail applications. The key benefits of compactness, silence and efficiency in the standard models will be enhanced by the capability of continuous capacity modulation of the ZX digital models. This makes ZX digital refrigeration units the perfect fit for applications with wide load variations.

Copeland scroll indoor refrigeration units are equipped with the latest refrigeration scroll compressors and constitute the widest range of their kind. The modular line concept offers base units which can be adapted to the target application by various options including weather housings and fan speed controls.

Copeland scroll digital receiver units HLR are an innovative offering for food service and retail businesses. Their compact design and the power of digital scroll continuous capacity modulation enable optimized environmental integration with highest system efficiency.

Semi-hermetic refrigeration units: robust, reliable and efficient air-cooled refrigeration unitplatforms featuring semi-hermetic reciprocating compressor technology are for use in high-medium- and low-temperature applications. Emerson has expanded its semi-hermetic product range by the innovative Stream indoor refrigeration units which complete a product range from 0.8 - 40 hp with dedicated refrigerant approvals for R407A/F, R448A/ R449A, R404A, R134a, R450A and R513A.
